## Prominent architect to speak at OU

by Haley Davis

February 20, 2013

A nationally-recognized architect will speak at OU about collaboration among everyone involved in architectural projects, as well as how to deal with old and new buildings.

Rob Rogers, lead architect for the design of SandRidge Energy's New Corporate Campus and the founding partner of Rogers Marvel Architects, will hold a free public lecture Thursday.

Rogers will talk about how to handle designing old and new buildings' interior and exterior spaces and how to collaborate between architects, contractors and clients, said Hanz Butzer, associate professor at the College of Architecture.

Rogers is a practicing architect who has taught at design studios at universities including Columbia University, Parsons The New School for Design and Harvard University, according to a press release.

Currently, he is working on other projects in Washington D.C. and New York, according to the press release.

The lecture is sponsored by the OU College of Architecture and the Bruce Goff Chair of Creative Architecture lecture series. It will be held at 7 p.m. Thursday, Feb. 21 in Adams Hall 150.
